Step-by-step guide
to leasing your Motability Scheme car with adaptations

Questions answered
our customers most frequently asked adaptations questions
Who’s involved
We are Motability Operations Ltd, a company authorised and regulated by the Financial Conduct Authority. All Motability Scheme vehicles are leased to customers by us.

Watch our adaptations film clips
motability.co.uk/adaptationsfilms
Adaptations are a range of devices that can be fitted to your car, typically falling into three categories: to help you drive, to help you stow your wheelchair or scooter and to help you get in and out of your car. Today over 50,000 customers have adaptations fitted to their cars, to make their driving or travelling experience easier and more comfortable. This guide is designed to explain the basic functions of some of our most popular adaptations, and get you on the road to finding the right answers to your mobility needs. We'll take you through each stage step-by-step, from getting the right advice, to ordering adaptations for your Motability car.

**Our advice**

Many cars now have standard features such as automatic transmission, push button ignition, auto wipers, auto lights and parking sensors, all of which can help make driving or travelling easier. Speak to your Motability Scheme dealer about how these features could help improve your experience. You can find your nearest dealer by visiting our website at motability.co.uk

1. **Driving Adaptations**
   to help improve your driving experience

2. **Stowage Adaptations**
   to stow your scooter or wheelchair

3. **Access Adaptations**
   to help you get in and out of the car

4. **Ordering Adaptations**
   a helpful guide to the process
Driving adaptations help with speed control, steering and signalling. They vary from simple attachments, to replacing all existing controls with a system individually designed for you. In most cases the original controls can still be used with adaptations in place, so nominated drivers can still use the car. Most driving adaptations require an automatic gearbox, and you must ensure you are able to control the vehicle safely when using any adaptations and comply with any specific codes on your driving licence.
Speed control

A push/pull device is a good option if you find it difficult to use standard foot pedals to accelerate and brake. You just pull the control towards you to accelerate, then push away to brake. Push/pull devices are designed for use with automatic gearboxes only.
If you find push/pull hand controls take too much effort, an electronic accelerator may help. These enable you to accelerate by pressing on a ring positioned either in front of or behind the steering wheel, or by simply pulling on a trigger device. All electronic accelerators come with a hand operated brake.

**Trigger accelerator**
With a trigger accelerator you pull with your finger to accelerate, and push away to brake.

**Over ring accelerator**
The over ring accelerator is fitted on top of the steering wheel. You push it down towards the steering wheel to accelerate.

**Under ring accelerator**
The under ring accelerator is fitted behind the steering wheel. You pull it towards the steering wheel to accelerate.

**Ghost ring accelerator**
The ghost ring accelerator is fitted behind the steering wheel. You control the speed by using your fingers in side to side movements.

Our advice
There are a number of Electronic Accelerators available. To find out which would be most suitable for you and any car you are considering, speak to your adaptation installer.
Left foot accelerators

If you have limited mobility in your right leg and cannot use the standard accelerator comfortably, you may benefit from having a left foot accelerator fitted. This will allow you to control the speed with your left foot, while the original accelerator is safely out of the way.

Our advice
If you have never driven with a left foot accelerator it is important to speak to your adaptations installer or a Mobility Centre for advice.

Floor-mounted accelerator
A floor-mounted accelerator is fitted to the left of the brake, so that you are able to use your left foot to accelerate. A pedal guard is fitted over the original pedal whilst the new accelerator pedal is being used.

Twin-flip accelerator
A twin-flip accelerator is an additional pedal fitted to the left of the brake pedal, enabling you to use your left foot to accelerate. When the new pedal is in use the original pedal folds away. If you have a nominated driver that does not require adaptations, in most cases you can fold the new pedal away and the original pedal can still be used.
If you have difficulty holding or turning a standard steering wheel, there are a number of simple solutions that may well help you.

**Steering ball**

If you have hand controls fitted, a steering ball is often essential, as it enables you to steer the car with one hand, while operating hand controls with the other. You can combine a steering ball with a remote control device to assist with other functions such as headlights and indicators. Many can be easily attached and removed.

**Our advice**

If you find using a steering wheel difficult, or it makes your arms tired on longer journeys, lightened, power-assisted steering could help and comes as standard on the majority of new cars. You should speak to your dealer to find out more.
If you struggle to reach or operate a car’s standard controls such as the indicator, handbrake or foot pedals, there are simple adaptations to make things easier.

**Remote control devices**
Remote control devices help make it easier to operate some of your standard car controls, such as the indicators, windscreen wipers and headlights.

**Built-in indicator switch**
An indicator switch can be added to your hand controls. This simple addition allows you to operate the indicators by flicking a switch, whilst remaining safely in control of your car.

**Pedal extensions**
If you have difficulty reaching foot pedals when driving, you could have them extended, bringing them closer to you. This will give you more comfort while controlling the car with ease.

**Easy release handbrake**
If you have difficulty operating a standard handbrake, an easy release handbrake reduces the lever grip required and eliminates the use of the thumb to depress the button.

**Our advice**
If you find using a handbrake difficult, many new car models feature an electronic handbrake as standard. You should speak to your dealer to find out more.

**Remember**
Not all adaptations work with all cars, check with your installer that any driving adaptations you need are suitable for any car you are considering.
The easiest way to lift your wheelchair or scooter into your car is with a stowage system, such as a boot hoist or rooftop stowage unit. Both options work at the touch of a button, taking the weight of the wheelchair or scooter, helping you guide the product into either your car boot, or your rooftop stowage unit. Adding a boot hoist can offer an alternative to a Wheelchair Accessible Vehicle (WAV).
Car boot and rooftop stowage

The size and weight of your wheelchair or scooter will affect the type of boot hoist you need and the space required. Take it with you to the dealership to rule out any cars that don’t have enough boot space. It’s critical you speak to an installer to be absolutely sure there is room for both the wheelchair or scooter and the hoist to function.

A car roof top stowage unit could be a solution if you transport a manual wheelchair, and need to use your boot to store other items. They can usually be installed on either the passenger or driver side.

2-way hoist

2-way hoists are for lighter wheelchairs. They operate with an up and down action only, so you will need to push the wheelchair into the boot by hand, then secure the product using tie-downs. Although generally for use with smaller products, the rear seats may still need to be part or fully folded flat, so again this is an important consideration when deciding which hoist is best for you.

Rooftop stowage unit

A rooftop stowage unit allows you to store a folded, lightweight manual wheelchair, in a box, on the roof of your car. An electric hoist lifts the folded wheelchair from the ground and then manoeuvres it into the rooftop box.

Our advice

Always speak to an adaptations installer first to ensure that you choose a combination of car and hoist that will work for your scooter or wheelchair.
These adaptations allow easier access for passengers or drivers and offer an alternative to Wheelchair Accessible Vehicles (WAVs). The key advantage to access adaptations is that they allow you to remain in your preferred position within the car and with certain adaptations on the original car seat.
Getting in and out of your car

Transfer plates
A transfer plate is fitted to the side of the car seat and provides a smooth surface between the wheelchair and the car seat to help you with the transfer. Once you have transferred into the vehicle and are comfortable, the transfer plate can simply be folded out of the way.

Transfer plates can be either manual or electric, however electric versions cost more.

Electric person hoist
The electric person hoist includes a permanent mount fitted to the car, three sections that clip together and form a frame and a specially designed canvas sling seat.

The sling is slipped onto the hoist and is raised automatically by pressing a push button control. Once you are seated in the car, the frame of the hoist can be removed and stowed in the boot, but the sling remains in place, making it easier to reverse the process at the end of the journey.

Note: Swivel seats can only be fitted in some cars.
Please speak to one of our adaptation installers that specialises in swivel seat installations, who will happily advise on vehicle choices.

Swivel seats
A permanent swivel seat turns, and in some cases moves in and out of the car, then lowers or tips, to make getting in and out of the seat easier. Manual and powered versions are available. Remember, you may need help putting your wheelchair in the boot if you are not able to do it yourself.

Wheelchair swivel seats are also available. They are made up of two parts and allow your wheelchair base to connect to a specially designed car seat. Wheelchair swivel seats cannot be operated independently, as you will need someone to help put the wheelchair base into position and store it once you are in the car.

Our advice
To use a transfer plate it is essential that you consider your upper body strength, as you’ll need to be able to transfer yourself out of your wheelchair, onto the transfer plate and back again.
The following pages will help explain the process of choosing and ordering a car fitted with adaptations, including the best steps to take to make sure you drive away with the most suitable combination of car and adaptations. On page 18 you’ll find a useful list of frequently asked questions, but if there’s anything else you would like to know please find more detailed information at motability.co.uk/adaptations.
Getting a Motability Scheme car with adaptations

You can apply to lease a product through the Motability Scheme if you receive one of the following allowances, and have at least 12 months remaining:

- Higher Rate Mobility Component of the Disability Living Allowance (HRMC of DLA)
- Enhanced Rate of the Mobility Component of Personal Independence Payment (ERMC of PIP)
- War Pensioners’ Mobility Supplement (WPMS)
- Armed Forces Independence Payment (AFIP)

Top tips for adapting your car:

1. Not all adaptations are suitable for every type of car; it’s all about compatibility of car and adaptation. That’s why it’s so important to consider the adaptations you need before you choose your car.

2. Adaptation installers are the best people to give advice on which adaptations might best suit your needs, especially if you are considering stowage or access adaptations.

3. Not all adaptations on the Scheme are available from every installer. Once you know what you need, if the supplier you have been considering cannot supply it simply speak to another of our Scheme installers.

4. If you cannot find the adaptation you need, please speak to an adaptations installer for further advice.

How do I get adaptations on the Motability Scheme?

Arranging adaptations when ordering your Scheme car is the easiest and most cost effective way to do so – your adaptation installer can ensure that the combination of the car and adaptations, along with a wheelchair or scooter if you use one, all work together, and your car is delivered with your adaptations fitted ready to enjoy.

Over 150 of our most popular adaptations can be fitted to your car at no extra cost. Others require payment in addition to your Advance Payment directly to your car dealer at the start of your lease.

Adapting your car during your lease

If you need to add any adaptations during your lease, you will need to inform our Customer Services team on 0300 456 4566 and RSAM on 0300 037 3737 to ensure you are covered before contacting any Motability Scheme adaptations installer to discuss your needs. You will need to pay the cost of these adaptations direct to the adaptation installer.
There are just three simple steps to choosing the adaptations and car that best suit your needs

If you’ve never driven a car with adaptations, you should consider contacting Driving Mobility, an organisation with a network of independent assessment centres who specialise in mobility assessments.

There are 16 centres across the UK, each employing qualified occupational therapists and driving instructors. They will provide you with an independent assessment, as well as practical driving experience in a car fitted with adaptations, to help you understand the types of adaptations you may need to improve your driving or travelling experience. Call our Customer Services team on 0300 456 4566 if you would like to arrange a Mobility Centre assessment before speaking to an adaptation installer or dealer.
Find a choice of adaptation installers near you at motability.co.uk/adaptations. Or call one of our team who will be happy to help 0800 093 1000.

First...
Speak to an adaptation installer and discuss your needs

There are over 100 adaptation installers across the UK who supply the Motability Scheme. You can find their contact details and information about the adaptations they provide at motability.co.uk/adaptations or call 0800 093 1000. Remember, the adaptations you need may not be suitable for all cars. Speak to your installer about which cars are most likely to work with your chosen adaptations.

Then...
Visit a dealer and choose your car

With a huge selection of cars to choose from, there’s bound to be one that suits your needs, budget and the adaptations you require. There are nearly 5,000 dealers across the UK with trained Motability Scheme specialists who will be happy to talk you through your options. You can search for local dealers in your area, and find up-to-date pricing for all the cars on the Scheme at motability.co.uk.

Finally...
Order your new car and adaptations

Once you have chosen your adaptations and car, your Motability Scheme dealer will complete the simple online ordering process with you. They will work with a preferred installer to ensure that your brand new car is fitted with the adaptations you need before it’s delivered. You can also arrange a free introductory session to help you get used to using your new adaptations. Simply speak to your dealer when you place the order.
Adaptations... your questions answered

Q. Can I buy adaptations without involving my dealer?
A. Ordering adaptations through your dealer when you order your car is the only way to take advantage of the great prices offered through the Motability Scheme. You can arrange adaptations yourself, but only through a Motability Scheme adaptation installer and you will need to pay the cost of any such adaptations directly to the installer. Remember to contact our Customer Services team and RSA Motability (RSAM) first, to ensure your insurance covers this.

Q. Can I use more than one installer?
A. Most installers cover a range of adaptations and it is very rare to need to use two different installers. However, if this is the case, please talk to your Motability Scheme Dealer to discuss a solution.

Q. I need several adaptations to my car, but I’m worried they won’t be fitted in time.
A. By placing your order at the start of your lease, your dealer and the adaptations installer will work together to take the worry out of ordering your new car. If there are any delays or issues along the way, your dealer or adaptation installer will let you know and if you currently lease a car through the Motability Scheme, you will be able to stay in it until your new car is ready.

Q. Can I transfer an adaptation from my old car?
A. Some adaptations may be able to be transferred as long as they are suitable for your new car. If you had your adaptations fitted at the start of your lease, then you may have the option of transferring them from your existing vehicle to your next Motability Scheme car at no extra cost, providing they are still suitable for your needs and for your new vehicle. For more information, talk to your adaptation installer or call us on 0300 456 4566.

Q. Can I get any financial help with the cost of adaptations?
A. Many of our adaptations are available at no additional cost, but if you are unable to afford essential adaptations Motability, the charity, may be able to help. To ensure their limited funds go to those most in need, financial assistance applications are means-tested and any help will only be given towards your basic mobility needs. This means that if you are successful you will not necessarily receive help towards your preferred adaptations if a better value alternative, that meets your needs, is available. For more information, call our Customer Services team on 0300 456 4566.

Q. I am part way through my current lease but now need adaptations, what do I do?
A. If you think you would benefit from an adaptation for your current Motability Scheme car you should first call our Customer Services team on 0300 456 4566 and they will advise you on the steps that you need to take. You will also need to inform RSAM by calling 0300 037 3737 to make sure you are covered by your insurance policy. You will have to pay for the adaptation yourself and payment will need to be made directly to the installer. Your adaptation installer will inform you of how long the installation process will take. Remember – only a Motability Scheme adaptation installer should fit and/ or remove adaptations.

Q. I’ve never had adaptations before, where do I start?
A. Our adaptation installers will be happy to help you choose the most suitable adaptation for your needs. There are more than 100 adaptation installers across the UK who supply the Motability Scheme. You can find their contact details and information about adaptations they provide, at motability.co.uk/adaptations or call 0800 093 1000.

If you’ve never driven with an adaptation before, it may be worth visiting a mobility centre for an assessment – see page 19 for contact details.
